Company Profile

The Garment industry is located in Tamil Nadu, India. The company has its own knitting unit, dyeing unit, compacting unit, and embroidery unit. It is capacitated to manufacture its own fabric using yarn for all its Standard Products, which are vests, briefs, trunks, and T-shirts (without design). For all other patterned products fabric is out sourced and stitched in-house. It is one of India's foremost manufacturers of knitwear for all age groups.

With over 40 years of experience it has unique product ranges that are designed to cater to every segment of men, women, boys, and girls; covering modern youth, leaders, executives, page 3 people, sportswear, leisure, and thermal wear..

Production Process - an Outline

The Garment Industry is capacitated to manufacture its own fabric using yarn for all its Standard Products, which are vests, briefs, trunks, and T-shirts (without design). For all other patterned products fabric is out sourced and stitched in-house. The client has warehouses to store fabric between arrival and manufacturing. From there the material are sent for "Relaxing", where it is allowed to relax and contract prior to being manufactured. Simultaneously the garment manufacturer ensures that the quality of the fabric meets customer standards. This step is performed by manually spot-checking each bolt of fabric using a backlit surface to identify manufacturing defects such as color inconsistency or flaws in the material.

After fabric has been relaxed, it is transferred to the spreading and cutting area of the garment manufacturing facility to allow operators to identify fabric defects; control the tension and slack of the fabric during cutting; and ensure each ply is accurately aligned on top of the others. Next, garment forms or patterns are laid out on top of the spread, either manually or programmed into an automated cutting system. Lastly, the fabric is cut to the shape of the garment forms using either manually operated cutting equipment or a computerized cutting system.

As per customer specifications embroidery is performed using automated equipment, often with many machines concurrently embroidering the same pattern on multiple garments. The garments are later sewn in an assembly line, where sewing machine operators receive a bundle of cut fabric and repeatedly sew the same portion of the garment, passing that completed portion to the next operator.

Quality assurance is performed at the end of the sewing line to ensure that the garment has been properly assembled and that no manufacturing defects exist. Cosmetic flaws, stains, or other spots on the garment are marked and cleaned using steam, hot water, or chemical stain removers.

Fully sewn garments are ironed folded, tagged, sized, and packaged according to customer specifications. Lastly, retail-ready garments are placed in cardboard boxes and shipped to client distribution centers.

THE PAIN POINTS FACED BY THE ORGANISATION

- The company has 4 manufacturing units in the state with siloed systems that could not integrate processes of the units
- The organization did not have a digital system to track and update the top management with reports on:
    - Daily sales
    - Overall Invoice details
    - Stock Value in warehouse
    - Franchises Sales Details
    - Production area stock
    - Details of FG despatched
- The existing legacy POS systems were standalone solutions for each shop. So the batch jobs were done at a certain frequency to bring all the data together into the server; due to which, the data was unavailable online.
- The legacy system could not support and track order-wise and random-order sales.
- The payroll system maintained on excel sheets made it a very tedious process to manage the processing and payment of wages for thousands of employees on a weekly basis.

ROADMAP ERP

Implementation

Roadmap understood the needs and purposes of the company's business processes, through the Roadmap Business Process Re-engineering (BPR) approach. Roadmap's BPR experts collaborated with the organization's core team and, through Preliminary Analysis & As-Is Study, captured the changes required to address the digital needs of all its business processes, especially the pain points. The Roadmap ERP modules implemented into the businesses workflow to digitize, integrate, streamline, and sufficiently automate the system are:

- Financial Management
- Supply Chain Management
- Planning & Manufacturing
- Customer Relationship Management
- iPos- integrated POS
- Payroll Management
- Plant Maintenance
- Gate Entry Management

Roadmap's answer to the company's pain points

Roadmap powers the organization's business process and has eradicated all its pain points through the following solutions:

- Roadmap monitors and tracks the vital functional aspects of the company, and at 11:59 PM everyday an email is automatically generated and sent to its MD with reports on:
  - Daily sales with break-up details of sales done via card transactions and sales done through cash transactions
  - Overall Invoice details with details of various types and respective percentages of discounts offered
  - Value of opening stock in the warehouse, value of stock sold, and value of closing stock in the warehouse for the day
  - Shop-wise stock data
  - The provision of billing software to the franchises furnishes the details of daily sales by Franchises
  - Details of level of stock at the production area helps to ascertain the current, used, and required stock of raw materials
  - Quantity, value, tax-value, LR number, and transport details of FG despatched
  - Usage details of the ERP to the tune of reporting if the user has switched on the system.

- Roadmap ERP's integrated iPOS system assimilates the stock details of all the shops to provide the details of the stock in one shop to the other in an online mode, so that products in one shop can be sold and billed from another, and later physically delivered.
- Franchises are provided Billing software in matter of minutes, while the master is updated in an even quicker fashion.
- Roadmap ERP system supports 'order-wise' as well as 'random order' production and sale of FG to meet priorities.
- Roadmap's solution for HR & Payroll promptly registers the list of employees that changes every week and efficiently calculates the disbursal of weekly wages.

Implementation Success

Roadmap ERP has perfectly aligned with the organization's business workflow with minimal requirement for customization. The system has made the management of business a lot easier by integrating all the business and manufacturing units from within and also with vendors and retail outlets. The ERP solution facilitates faster and better management decisions by providing crucial information in a timely manner. It also eliminates errors caused by multiple input of the same data and has ultimately delivered high ROI.
